PREDGOVOR

Federalni zavod za statistiku uradio je statistički bilten “Biljna proizvodnja u 2016. godini“ u kojem su prezentirani podaci biljne proizvodnje, a rezultat su provedenih statističkih istraživanja prema Planu provođenja statističkih istraživanja od interesa za Federaciju Bosne i Hercegovine.

Želja nam je da našim korisnicima prezentiramo što više podataka o biljnoj proizvodnji u Federaciji Bosne i Hercegovine, kao što su podaci o zasijanim površinama u 2015/16. godini, ukupnoj proizvodnji usjeva, voća i grožđa i prosječnim prinosima istih u 2015. godini.

Podaci su dati za nivo Federacije Bosne i Hercegovine, kantona i općina.

PREFACE

The Federal Office of Statistics has completed the statistical Bulletin “Plant production in 2016” in which data are presented on crop production from regular statistical surveys in accordance with “The Statistical Research Programme for the Federation of Bosnia and Herzegovina”.

We want to present more data on plant production in Federation of Bosnia and Herzegovina to our users, such as: the sown area in 2015/16, total crop, fruit and grapes production and their average yield (t/ha, kg/tree and kg/vine) in 2015.

Data are presented for the Federation of Bosnia and Herzegovina, cantons and municipalities.

Doc. dr. Emir Kremić, direktor
Federalnog zavoda za statistiku

METODOLOŠKA OBJAŠNJENJA

Podaci o biljnoj proizvodnji prikupljaju se redovnim statističkim istraživanjima i to:

- 1) Podaci o zasijanim površinama (PO-21 i PO-22),
- 2) Podaci o ostvarenim prinosima usjeva, voća i grožđa (PO-32, PO-33 i PO-34).

Podaci predstavljaju ukupno ostvarenu poljoprivrednu proizvodnju, iako se prikupljanje podataka obavlja ovisno od izvještajne jedinice. Izvještajne jedinice za biljnu proizvodnju su:

- 1) poslovni subjekti, zemljoradničke zadruge i druge organizacije koje se bave poljoprivrednom proizvodnjom i dostavljaju podatke redovnim statističkim izvještajima,

- 2) općine za poljoprivredna gazdinstva/gospodarstva, a podaci se prikupljaju metodom procjene koju rade stručnjaci za poljoprivredu u općinama.

Podaci se iskazuju za općinu ukupno.

Podaci o zasijanim površinama i broju stabala voća i čokota/trsova

Prvo se utvrđuju podaci o površinama pojedinih kategorija korištenja zemljišta i upoređuju sa istim podacima iz prethodne godine. Obavezno voditi računa o promjenama površina pojedinih kategorija korištenja zemljišta u toku godine.

Poslije toga procjenjuju se zasijane površine na oranicama i baštama po pojedinim usjevima, broj stabala voća po vrstama voća, kao i broj čokota/trsova vinove loze (ukupan broj i broj sposobnih za rod).

Podaci o ostvarenoj proizvodnji usjeva, voća i grožđa

Požnjevena površina je površina sa koje je usjev požnjeven i ubran prinos. Požnjevena površina može biti manja od zasijane površine u slučaju ako su usjevi na nekim površinama usljed elementarnih i drugih nepogoda uništeni, te zbog toga nije obavljena žetva niti ubran prinos.

Kod voća i čokota/trsova uzima se broj stabala i čokota/trsova sposobnih za rod, a ne broj stabala sa kojih je ubran prinos. Ako je u međuvremenu došlo do stradanja nekih stabala ili čokota/trsova podaci moraju biti umanjeni za taj broj stabala ili čokota/trsova.

Ostvareni prinos ratarskih usjeva predstavlja prinos normalne vlažnosti koji je dobiven po završenoj žetvi/berbi i vršidbi, tj. prinos po odbitku količina izgubljenih pri žetvi, prijevozu do gazdinstva/gospodarstva, vršidbi i sl.

Prinos po jedinici površine (t/ha) obračunat je na požnjevenu površinu.

Prinos po stablu i čokotu/trsu (kg) obračunat je na stablo sposobno za rod, odnosno na čokot/trs.

METHODOLOGICAL NOTES

The data on crop production are collected through regular statistical surveys:

- 1) *The data on sown area: (PO-21 and PO-22),*
- 2) *The data on production of arable crops, fruit and grapes: (PO-32, PO-33 and PO-34).*

The data include total production; also the data are collected separately by kind of report unit. The report units for plant production are:

- 1) *The agricultural enterprises, agricultural co-operatives and other organizations which are engaged in agriculture and data are gathered through regular statistical reports,*

- 2) *The private agricultural holdings and data are gathered through estimations. The estimations are made on local level – for each municipality in total. The estimators are currently agricultural experts in the local authorities of municipalities.*

Data on sown area and number of fruit trees and vines

The first phase is the assessment of land use data and comparing this data with data of last year. It is important to take into account the changes of land use categories during the determined year.

Then to assess total sown arable area and to make estimation on number of fruit trees and vines (total number and number of fruit-bearing trees/vines).

Crop, fruit and grape production data

Harvested area is the area on which crops are harvested and yields are gathered. It can be smaller than the sown area in the case that crops were weather-beaten and because of the harvest was not carried out.

The trees and vines – are number of trees and vines capable of bearing, not tree numbers where crops were taken. In the case of harm to trees and vines this should be disposed of.

Realized yield crop is the yield of standard humidity after the deduction of all losses during harvest, transport and threshing.

Yield per unit of area (t/ha) is computed on the base of harvested area.

Yield per tree/vine (in kg) is computed for fruit-bearing tree or vine.
